

Hello,

r/keepournetfree, a subreddit dedicated to internet freedom, invites you to a discussion. We would discuss the creation of an open-source guide that would assist many looking to create a WISP to create traditionally underserved communities. We would prefer to host the discussion in a discord that is representative of the subreddit. The time and date of the discussion can be arranged to fit into your schedule, but planned ahead of time so we can prepare and maximize the input we can bring into the discussion.
